

MOUNTAIN

Jérôme Clémentz - Reunion Island

OVERMOUNTAIN
Boundary-breaking, dual-travel, dual-geometry, two-in-one superbikes that redefine the "all" in all-mountain riding.

CROSS COUNTRY FULL SUSPENSION
Light, responsive, versatile full suspension bikes designed for fast trail riding.

CROSS COUNTRY HARDTAILS
Ultra-light, race-oriented hardtails for riders seeking the ultimate in efficiency and speed.

TRAIL HARDTAILS
Light, durable, high-performance mountain bikes for all-around trail riding.

LEFTY

SUPERIOR SUSPENSION PERFORMANCE
THROUGH UNCONVENTIONAL DESIGN.

CRAZY LIGHT

Almost a pound lighter than its competitors AND it's stiffer and smoother? Sounds crazy and, well, it is. Crazy good.

XLR/PBR DAMPERS

Available with either XLR remote lockout, or PBR push button lockout for out-of-the-saddle hammering.

DUAL INTEGRATED CROWNS

Dual Crowns distribute loads more evenly for a stronger and stiffer fork

INVERTED DESIGN

Like racing motorcycle forks, the larger diameter fork tube is on top, the best arrangement for fighting flex and increasing strength

OPI LOWER LEG/AXLE

The One-Piece-Integrated lower leg and tapered axle are forged from a single piece of aluminum for incredible strength and stiffness.

HYBRID NEEDLE BEARING SYSTEM

Where other forks bind, Lefty shines, thanks to its proprietary needle bearing assembly. Smooth suspension action under any load.

STIFFER

Their unconventional design give them stiffness comparable to the burliest freeride forks, while weighing less than any competitor. Lightweight efficiency with heavyweight control.

LIGHTER

At 1332 grams and 1850 grams respectively, the Lefty Carbon XLR and SuperMax Carbon are over 300 grams lighter than their competitors.

Manuel Fumic - Cannondale
Factory Racing - Finale Ligure, ITA

STRONGER

Gram for gram, Lefty and SuperMax are the strongest forks in the world. Even our lightest forks go head to head in destructive testing with forks designed for much more abusive riding. Cross-Country weight meets All-Mountain tough.

SMOOTHER

The heart of the Lefty, Cannondale's patented hybrid needle-bearing technology keeps the suspension moving freely, regardless of load. Even under the hardest braking, impact, and steering forces, the wheel is able to track the ground fluidly for maximum control.

LESS MAINTENANCE

Lefty and SuperMax require around half the regular maintenance of the competition, so you'll spend less time servicing, and more time riding.

SUPERMAX

THE BIGGER, BADDER LEFTY.

BIGGER. BADDER.

SuperMax has stiffness and strength that rivals DH forks, yet is lighter than most all-mountain forks.

DUAL INTEGRATED CROWNS

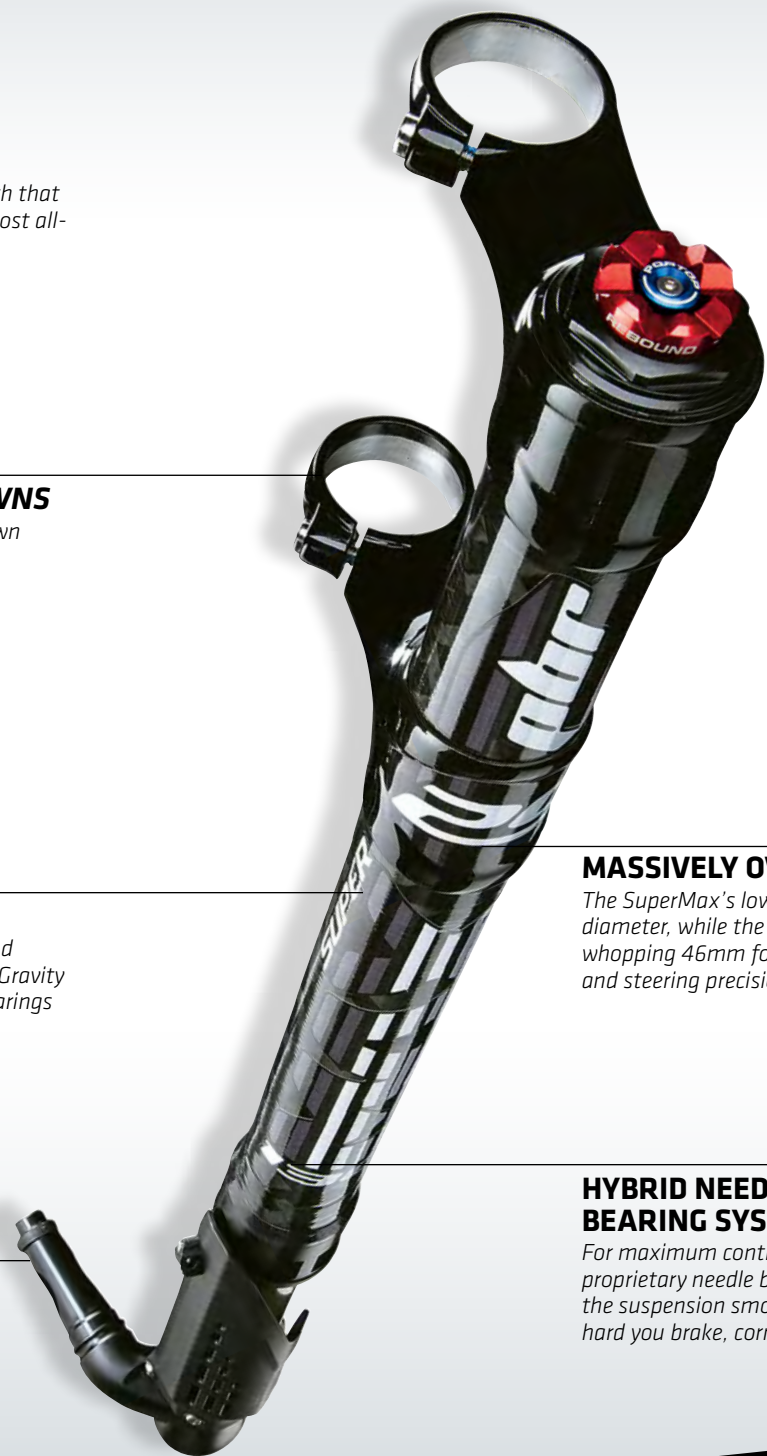

Stiffer and stronger than single crown set-ups.

INVERTED DESIGN

Inverted design is not only stiffer and stronger, it's also better lubricated. Gravity holds lube against the seals and bearings for longer life and smoother action.

60MM OFFSET

SuperMax's 60mm offset achieves the Holy Grail of long travel 29ers - stable handling at speed and responsive steering when things get tight and technical.

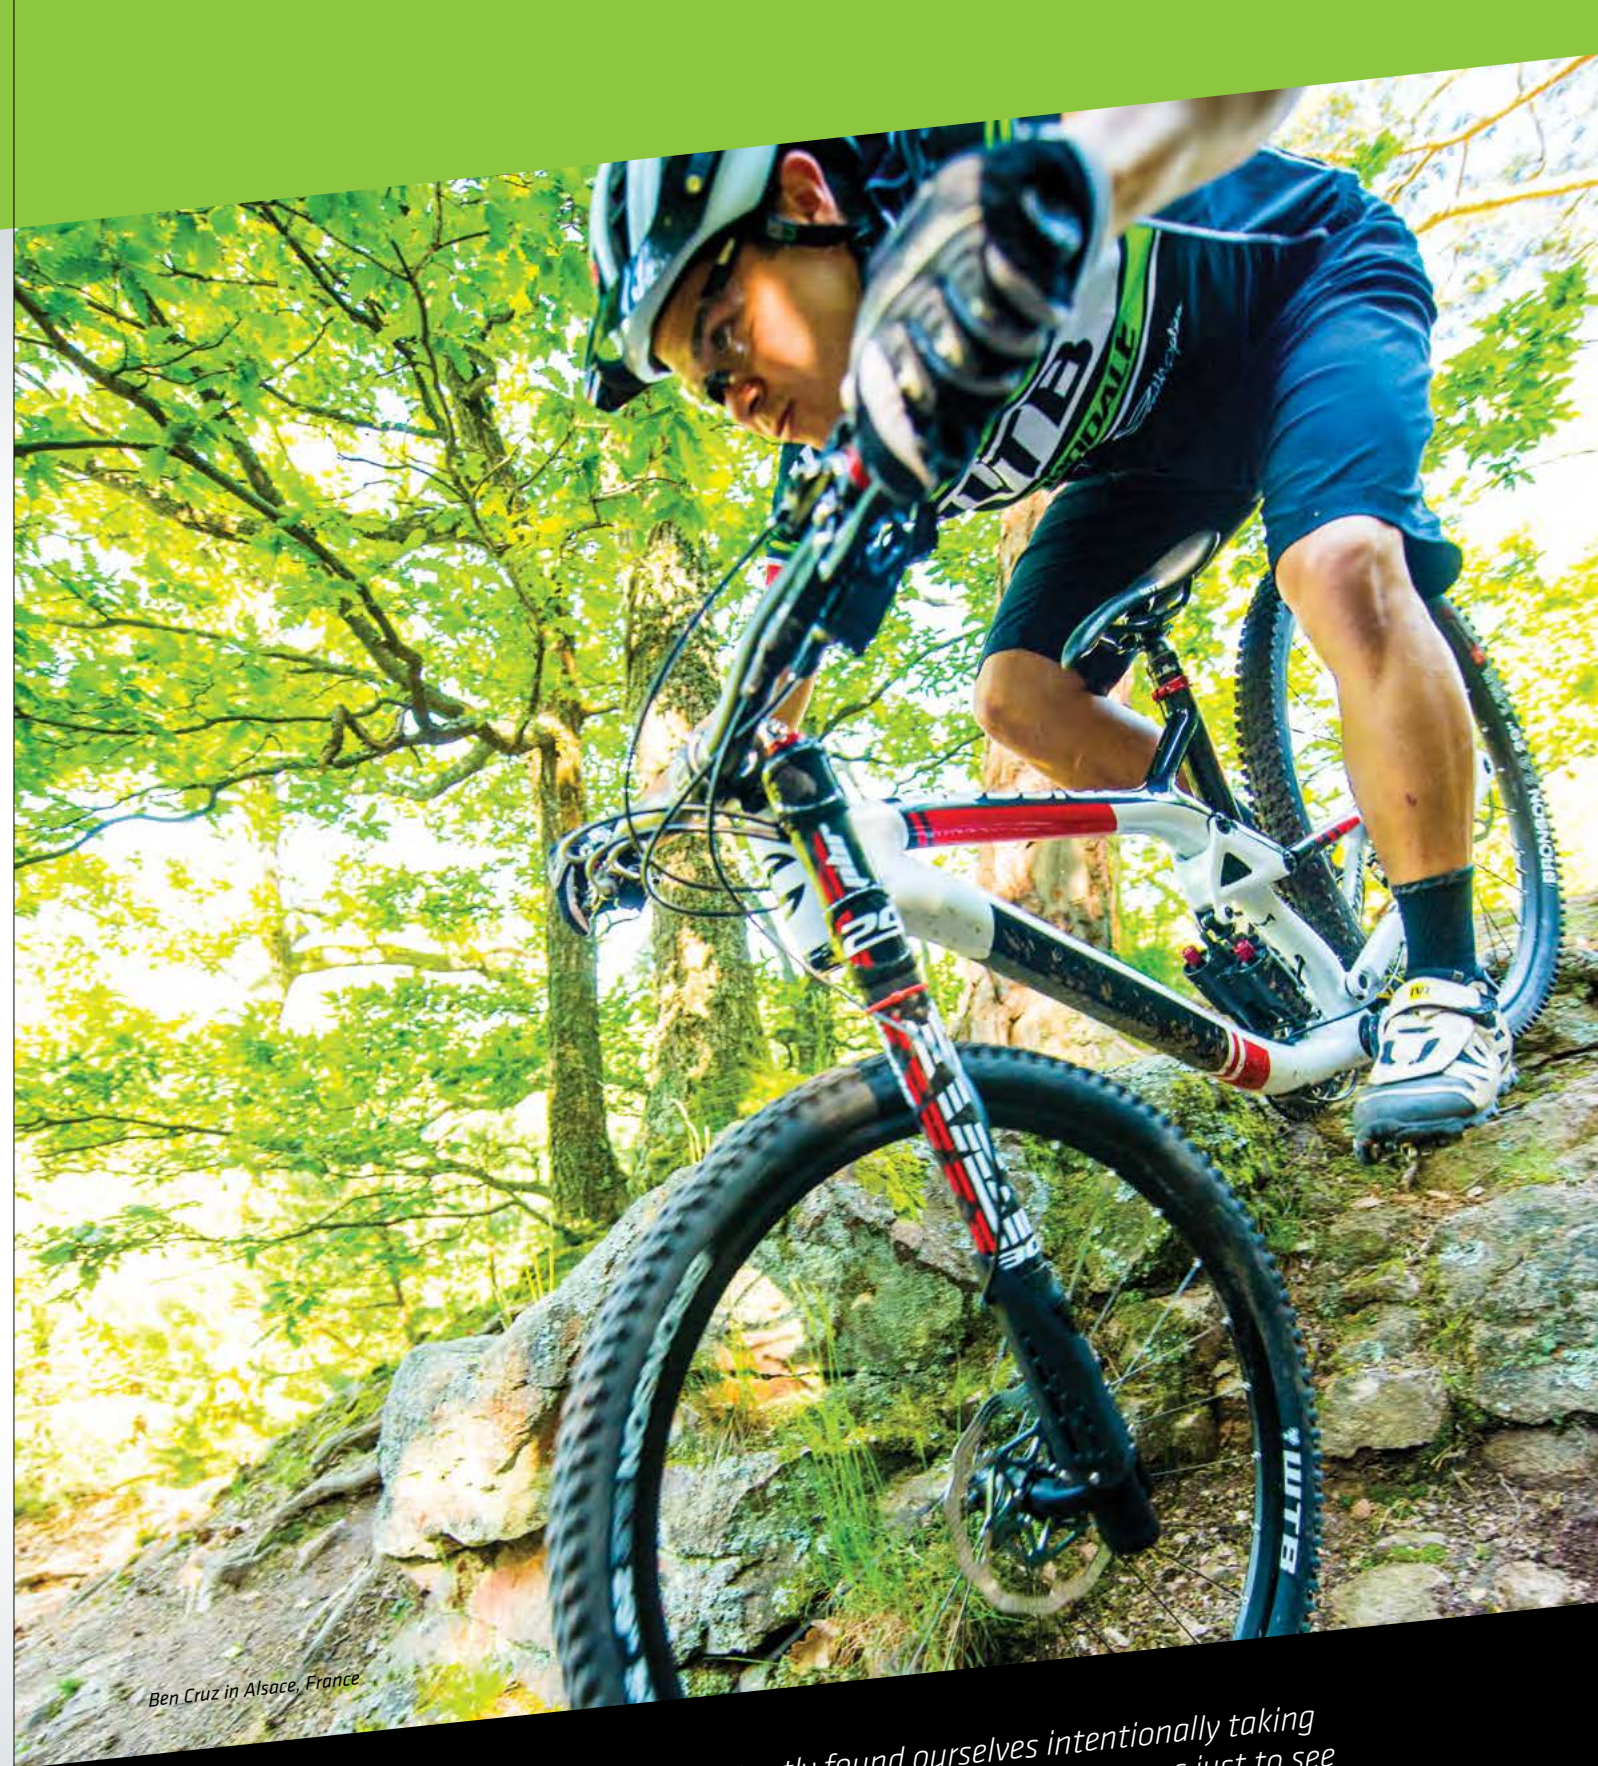

MASSIVELY OVERSIZED

The SuperMax's lower leg is 36mm in diameter, while the upper leg measures a whopping 46mm for maximum stiffness and steering precision.

HYBRID NEEDLE BEARING SYSTEM

For maximum control, SuperMax's proprietary needle bearing assembly keeps the suspension smooth, no matter how hard you brake, corner or land.

Ben Cruz in Alsace, France

With the SuperMax We constantly found ourselves intentionally taking the worse lines (ruts, flat-edged rocks, off cambers) in corners just to see if we could detect a weak spot...we couldn't!
-Mountain Bike Action

LIGHTER STIFFER STRONGER SMOOTHER LESS MAINTENANCE

TRIGGER 29

TWO PERSONALITIES...AND THEY'RE BOTH BAD-ASS.

With a flick of the switch, the Trigger 29 transforms from a 130mm-travel, pick-any-line, roll-over-anything trail eater, to an 80mm-travel climbing machine. Add in the switchback-slicing SuperMax with custom offset, and you get a bike so good, it's crazy...

TRIGGER 29 CARBON 1

FRAME: Trigger 29, BallisTec Hi-MOD Carbon SUSPENSION R/F: Fox DYAD RT2 (130/80mm) / Lefty SuperMax Carbon PBR 130 29 (130mm)
RD/SHIFT: SRAM XX1/X01 WHEELSET: Mavic Crossmax ST 29 BRAKES: Magura MT6 COLOR: Jet Black w/ Gray, White, Green - Matte (01)

BALLISTEC CARBON / SMARTFORMED ALLOY

Using fibers developed by the military for ballistic armoring, this high-strength carbon construction process yields a frame that's lighter than aluminum and pound-for-pound stronger than steel. The alloy versions use our ultra sophisticated SmartFormed aluminum construction for a frame that's strong yet light.

ECS-TC SYSTEM

Clamped 15mm thru-axle in the swingarm pivot and double bearings seat stay pivot eliminate flex for unmatched responsiveness and control.

DYAD RT2

The world's only true 2-in-one shock. DYAD's dual modes allow you to completely change travel, damping and geometry on the fly for the best possible performance across the widest spectrum of terrain.

TRAVEL

80mm to 130mm on-the-fly adjustable rear travel / 130mm front travel.

LEFTY SUPERMAX

With its off-the-charts torsional rigidity, the SuperMax brings unheard-of levels of steering precision to longer travel 29'ers. The unique 60mm offset improves both high speed stability and low speed agility - perfect for Trigger 29's full-throttle attitude.

SIZES
S, M, L, X

TRIGGER 29 CARBON

Zero Pivot Seat Stays. Flexing carbon stays eliminate the pivot, saving weight and increasing stiffness.

FRAME: Trigger 29, BallisTec Hi-MOD Carbon **SUSPENSION R/F:** Fox DYAD RT2 (130/80mm) / Lefty SuperMax PBR 130 29 (130mm) **RD/FD/SHIFT:** Shimano XT

JEKYLL

GO ANYWHERE. RIDE ANYTHING.

Jekyll is the world's most successful Enduro bike. No surprise, really. With its responsive, ultra-rigid frame and its ability to instantly morph from a 90mm rocket to a 150mm bomber, it was born for it. Having guys like Weir, Cruz and Clementz doesn't hurt either...

SIZES

SCALPEL 29

BE A TRAIL SURGEON.

SCALPEL 29 CARBON BLACK INC.

FRAME: Scalpel 29, BallisTec Hi-MOD Carbon SUSPENSION R/F: Fox Float CTD (100mm) / Lefty Carbon XLR 100 29 (100mm) RD/FD/SHIFT: Shimano XTR/SRAM XO/Shimano XTR
WHEELSET: ENVE Carbon Twenty9 XC / Chris King BRAKES: Shimano XTR Race COLOR: Nearly Black, w/ Black, Gray Accents - Matte (01)

The Scalpel 29 is proof that a bike can be rock-solid and feather-light at the same time. With its ultra stiff-and-smooth Lefty fork, BallisTec carbon construction and ECS-TC pivots, it's the most efficient pedalling and precise handling XC dualie out there.

SUPERLIGHTWEIGHT DESIGN

Ultra light BallisTec Carbon or SmartFormed Alloy frames with the System Integration of the Lefty fork, OPI stem/steerer and Hollowgram SL cranks deliver complete bike weights our competitors can only dream of.

TRAVEL

100mm front and rear.

ECS-TC SYSTEM

A clamped, 15mm thru-axle in the shock linkage eliminates flex and play, providing unmatched center-stiffness for optimum control and steering precision.

ZERO-PIVOT SEATSTAYS

The seatstays are designed to flex vertically while remaining extremely stiff laterally and torsionally. This enhances suspension performance without affecting power delivery.

29'ER RACE GEOMETRY

The combination of a steeper-than-average head angle and super short chainstays gives the Scalpel 29'er a similar wheelbase and trail to our 26'er bikes for ultra sharp, responsive handling.

SIZES
S, M, L, X

SCALPEL 29
